Work Experience

- **Meta** — Menlo Park, CA
  Software Engineer — *September 2022 - Current*
  - **Instagram Delivery Infra**:
    - Develop offline detection API responsible for serving user content when they have a bad connection
    - Build real time on device personalization system to help personalize user's app behavior
  - **Horizon Feed**:
    - Build fullstack features using Graphql and React VR improving overall monthly active users and Oculus Store revenue
    - Develop cache system design to optimize initial javascript loading using Android native code which resulted in a 50% in app performance
    - Decrease Horizon Mobile's crash rate by 5% doing memory optimization using React Native
  - **Horizon Infra**:
    - Develop large scale e2e testing framework in Rust for large scale Horizon events
    - Build tooling for Horizon on mobile that enable teams to test changes much faster
    - Build server side tooling to allow for better disaster recovery handling for Horizon Cloud fleet
    - Improve loading latency by building system for both client and server side improving e2e loading latency by 15 seconds
- **Metabob** — Palo Alto, CA
  Backend Software Engineer — *May 2021 - August 2022*
  - **Code Error Detection API**:
    - Authentication API that supports Github, Bitbucket, and Gitlab
    - Improve NLP token processing by 50%
    - Build api for repo health status so users can export code health
    - Build backend pipelines for our CLI and VScode extension contributing to 80% of all company traffic within the first 3 months
  - **CLI Tool**:
    - Develop a CLI tool in Go that can analyze batches of files at once compared to our VScode extension
    - Built interfaces for customers to add our CLI tool into their code review pipeline
    - Worked with marketing team to develop demos of Github Co-Pilot vs Metabob CLI
- **SingTao** — Burlingame,CA
  Backend Engineer Contractor — *October 2020 - March 2021*
  - **Advertisement Platform**:
    - Develop an advertisement platform using PHP, Javascript,and MySql.
    - This backend system is design to work with Digital Signage system with the goal of being used by over 100 businesses in the San Francisco Bay Area.

Research

- **AR mobility**
  Best Paper Award at MMSys '23: ACM Multimedia Systems Conference 2023
  - **Streaming Algorithms**: Collect user data as they play Pokemon Go and develop a general machine learning base algorithm designed to create clusters of anchors points along with various other methods of loading 3D assets

Education

- **University of California Riverside** — Riverside ,CA
  BS + MS in Computer Science
